PROFESSIONAL EXPERIENCE

IT Executive | *Intellias Pro Private Limited*

June 2026 – Present

- ▶ Manage IT infrastructure: hardware, desktops, laptops, printers, and enterprise software.
- ▶ Provide on-site and remote technical support, preventive & corrective maintenance.
- ▶ Maintain structured network cabling (Cat6/Cat6A) and LAN/WAN connectivity.
- ▶ Manage MikroTik routers, network security, and access controls.
- ▶ Administer Active Directory, server health monitoring, backups, and IT policies.
- ▶ Manage NAS systems (FreeNAS, Synology), shared folders, permissions, and data integrity.

AI Trainee | *Corvit Systems Ltd., Lahore*

March 2026 – May 2026

- ▶ Engineered modular Python software components by leveraging core Object-Oriented Programming (OOP) principles, clean memory allocation management, and isolated virtual environments.
- ▶ Built end-to-end data manipulation and visualization pipelines using NumPy, Pandas, Matplotlib, and Seaborn to clean, transform, and analyze multi-dimensional datasets.
- ▶ Developed and evaluated supervised and unsupervised machine learning models—including Regression, Random Forests, SVMs, and Clustering—using 80/20 train-test splits and rigorous metrics like F1-Score, RMSE, and Precision/Recall.
- ▶

Certified Ethical Hacker (CEH Trainee) | *Corvit Systems Ltd., Lahore*

Sep 2025 – Nov 2025

- ▶ Performed OSINT reconnaissance and vulnerability assessments, identifying 15+ critical weaknesses across controlled lab environments using passive/active information gathering, footprinting, and enumeration.
- ▶ Deployed Snort3 IDS/IPS with 20+ custom detection rules and integrated Splunk Enterprise for real-time SOC monitoring, log correlation, and alert triage.
- ▶ Built a complete SOAR automation pipeline — Wazuh + Rocky Linux + Docker + n8n — reducing manual file integrity monitoring effort by ~70% through automated workflows.
- ▶ Simulated DDoS attack patterns (Python/Go) and botnet behaviours; designed detection playbooks and explored MISP for IOC sharing and threat intelligence enrichment.
- ▶ Conducted malware triage including static and dynamic analysis using Procmon, Procdot, and Regshot to identify obfuscation and packing techniques — directly applicable to host forensics and malware analysis roles.
- ▶ Explored social engineering simulations (OpenPuff, DeepSound) and steganography techniques, strengthening understanding of insider threat vectors.

Software Engineering Intern | *Amperor Tech, Lahore*

Aug 2025 – Oct 2025

- ▶ Developed RESTful APIs with NestJS, TypeORM, and PostgreSQL; built React.js dashboards for operational visibility — demonstrating scripting and automation proficiency (Python, TypeScript, JavaScript) transferable to detection logic and playbook development.

SECURITY AUTOMATION & DETECTION LABS

Five-Level AI-Powered SOAR & Detection Lab — Wazuh · n8n · Suricata · Gemini AI · MISP · TheHive · Shuffle

- ▶ Beginner — Integrated VirusTotal with Wazuh for file integrity monitoring; built n8n workflow with Gemini chat model for log analysis — reduced manual log review time by ~60%.

- ▶ Beginner+ — Extended n8n with webhooks and a custom Gemini-linked dashboard allowing natural language queries to filter and extract logs — enabling faster alert triage and false positive reduction.
- ▶ Intermediate — Deployed Suricata (Rocky Linux, Docker) as a Wazuh agent; enabled Wazuh manager log forwarding to Suricata; automated email alerts via n8n on any detection event.
- ▶ Upper-Intermediate — Wrote custom Suricata rules (Slowloris DDoS detection); extended SOAR playbook via n8n to use SSH, identify attacker IPs, block them automatically, and send incident email notifications.
- ▶ Advanced (In Progress) — Docker-based full IR pipeline: SQL Injection detection → automated alerts using Suricata, Wazuh, MISP, TheHive, and Shuffle; developing detection logic from raw network and host telemetry.

NETWORKING & INFRASTRUCTURE PROJECTS

- ▶ Cisco ISE — Deployed as a virtual machine for policy-based network access control and endpoint admission.
- ▶ WAF & Load Balancer — Built a production-like topology with Kemp LoadMaster to implement WAF rules and traffic distribution.
- ▶ OSPF/BGP Complex Topology — Configured static routes with NULL-0 (tagged E1/E2), loopback advertisements with tags, and virtual link tunnel configs ensuring full inter-device reachability without filter-lists.
- ▶ CCIE-Level Lab Solution — Solved OSPF external route tagging/filtering bypass trick and published the full walkthrough on Medium: medium.com/@muhammadrashid3

EDUCATION

Bachelor of Science in Computer Science | *Government College University Lahore (GCUL)*

Oct 2021 – Nov 2025

CGPA: 3.07 / 4.00

CERTIFICATIONS

- ▶ Certified Ethical Hacker awarded by EC-Council | Issued at: December 19, 2025 | Verify at: [CEH Certificate](#)
- ▶ Microsoft Azure AI Fundamentals (AI-900) — Microsoft
- ▶ EU/GIZ Talent Partnership with Pakistan — Advanced Cybersecurity Programme, Corvit Systems

TECHNICAL SKILLS

Threat Detection: Threat Hunting, Malware Triage (Static/Dynamic), Anomaly Detection, Suricata Custom Rules

Security Operations: SOC Monitoring (24/7), Incident Response, Alert Triage, Log Analysis & Correlation, False Positive Reduction, OSINT, Escalation Procedures

SIEM & SOAR: Splunk Enterprise, Wazuh, VirusTotal, n8n, Shuffle, TheHive, MISP, Playbook Development, Webhooks

IDS/IPS: Snort3 (custom rules), Suricata (Slowloris, DDoS, Botnet detection rules)

Network Security: TCP/IP, OSPF, BGP, EIGRP, VLANs, STP/RSTP, DHCP, NAT, ACL, Port Security, WAF (Kemp LoadMaster), Cisco ISE

Systems & Platforms: Linux (Kali, Rocky), Windows Server, Docker, GNS3, EVE-NG, Active Directory

Programming: Python, TypeScript, JavaScript, LLM-assisted Scripting (Gemini integration)
